EZ™ Insertion Valves Meet Demands of Military Bases

Improved Crew Training

Faster Installs

Overview

U.S. military bases face the same challenges, and probably more, than other communities. Infrastructure decline and tight budgets aren't problems exclusive to civilian life and effective utilization of manpower is always an issue.

The Test

Moody Air Force Base in Georgia invited Advanced Valve Technologies for a day-long training session that might include a live EZ™ install and they were surprised by the outstanding results.

The Challenge

The Water and Fuels Systems Maintenance Shop crew members had experience with the Occlude (TEAM) insertion valve and considered it both cumbersome and time-consuming. They said that they averaged eight hours for a single Occlude valve insertion. They wanted improvements.

The AVT session proved impressive.

The entire shop was able to receive hands on training in a fraction of the day. Not only were they able to complete class room formal training but they were also able to complete three valve insertions in less than 8 hours.

The Results

A letter was signed by the members of the crew and sent to AVT saying the experience was “phenomenal” and that “AVT has found something that is not only functional, but is also superior in quality and ease of use.”

Moody AFB is not unique in AVT's experience. We are proud to be the favored insertion valve system of the branches of our military based on demonstrated performance and value.
